Potsdam, December 2004

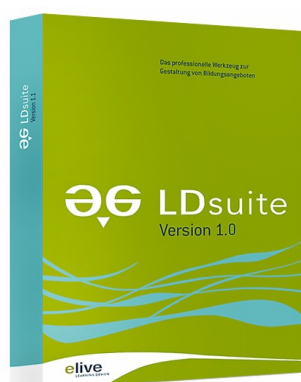

elive LD Suite – Professional Toolset for the Design of Training and Educational Services

*elive Learning Design presents **elive LD Suite**, the first tool for didactic design of learning and teaching aligned to the international IMS LD specification. **elive LD Suite** features advanced graphic modeling functions and a user friendly systematic approach enabling the design of a variety of traditional and modern learning scenarios (e.g. face-to-face, blended learning, e-learning etc.).*

Within the scope of a changing culture of learning the market of training and educational services makes new demands on the providers. This change is affected by new ways of communication, the trend to life long learning and a flexible organization of further education at institutions and enterprises. Training services for executives and staff need to be appropriate and with that design needs to be more efficient.

elive has tuned in to the trends with the development of a novel software for modeling processes of learning and teaching. elive LD Suite is applicable for design as well as for redesign of existing courses and integrates seamlessly into existing educational planning workflows. The intention is to map methodical concepts and structures in a convenient, systematic, comprehensive and standardized approach. The software features an advanced graphical user interface addressing users with didactic and organizational backgrounds without programming experience. With its purpose-built functions and features elive LD Suite covers a broad range of application for intermedia learning concepts (e.g. blended learning). With that elive LD Suite is suitable for face-to-face training as well as for e-Learning.

elive LD Suite enables creation and export of learning designs compliant to IMS LD 1.0 specification (levels A and B). Developed as a Rich Internet Application (RIA) elive LD Suite runs with an integrated database on Windows PCs enabling future releases to run as a web served http-client as well. It has a Flash based GUI and is easy to install.
